Exposome-NL Data Platform Data Access and Publication Policy

Purpose

The purpose of the policy is to guide researchers in performing analyses, writing papers and submitting publications and other types of reports based on geographical data (Exposome Surfaces) made available through the Exposome-NL data platform.

The geographical data gathered within the project can be accessed via the online portal: exposome.uu.nl.

Data Access Request

Permission and access to Exposome Surfaces is granted via the following process:

1. The requester completes a Data Access Request Form and sends it to expanse@uu.nl. The form includes:

a) Name of institute or company
b) Contact details of applicant
c) Suggested output channel
d) Working title of the project
e) Brief description of your objective, main outcomes, and (statistical) working plan
f) Requested surfaces and years
g) Indication of which cohort data will be used
h) Information on procedures
i) The funding source(s) of the applicants
k) A foreseen timeline

2. Proposals are evaluated by the Exposome Surfaces steering group, which is made up of domain experts. If there are questions then the request may need to be further considered - which may require revisions to the proposed plan. If a disagreement within the steering group exists with regard to approval or not, the steering group will gather and discuss the proposal. If no consensus can be reached, the steering group will vote. The majority of votes will determine the decision, and this decision will then be final.

All data access and publication proposals will be assessed against the following criteria: 1) Scientific rigor of analyses, 2) appropriate project group, and 3) overlap with other known analysis using the Exposome data platform.

3. The surfaces listed in approved proposals is provided to the requester by data managers.

4. The requester provides a (link to the) PDF of the paper upon its publication.

Data usage policy

- The data are shared under a CC-BY-NC-SA-4.0 license
- The geographic data that are provided after acceptance may only be used for the analyses as specified in the accepted publication proposal, and may not be further used or distributed.
- New research questions require the submission of a new proposal.
- A handling fee of €1,000 will be charged to cover the cost of handling the request and managing the data if linking of the surfaces to geolocations is to be performed by Utrecht University data managers. For commercial parties that want to make use of the Exposome-NL data platform a financial compensation is required as well.
- Projects that require tailored work by UU (e.g. data managers, GIS experts) will be asked for a compensation based on actual costs.

Publication policy

All manuscripts and (poster) presentations utilizing the data platform should include the following acknowledgement:

"Exposome surfaces were made available through the following projects: EXPANSE (ECH 2020, grant agreement No 874627) and EXPOSOME-NL. EXPOSOME-NL is funded through the Gravitation program of the Dutch Ministry of Education, Culture, and Science and the Netherlands Organization for Scientific Research (NWO grant number 024.004.017)."

Manuscripts must cite both the source data and the tool. Include in the manuscript the reference belonging to the used surfaces. These can be found in the metadata of each surface on exposome.uu.nl. For example, if you use (O3 concentrations) for your analyses, in your manuscript you will refer to its source paper: www.sciencedirect.com/science/article/pii/S0160412018309759 .

Also include the sentence:

"Surface data was accessed through the Exposome Data Platform tool (exposome.uu.nl)."

If possible, posters, brochures, infographics and PowerPoint slides in which data from the platform is featured should contain the Exposome-NL logo. Contact expanse@uu.nl for a high-resolution version.
